[#PowerOfVedicMath](#) [#VedicMathTricks](#) [#VedicMathWorld](#) [#VMLS](#)

The word 'Veda' is derived from the Sanskrit word 'Vid' which means 'Knowledge'. Vedas are the invincible ancient Indian literature. They are the oldest-ever texts to make implicit and explicit use of mathematics. Vedas are the earliest Indian scriptures. It really amazes any intellectual to see the level of advancement of the mathematical knowledge in 1500BCE text which originated in India and later in its commentaries by Indian Intellectuals then!

Research is being conducted to measure the effects of learning Vedic mathematics on the brain of a child. It suggests that Vedic Math develops the *logical aspect* of a child's brain. It provides a child the freedom to create his/her own method to reach to the correct answer of the given question. Vedic Mathematics provides quick and fast one-line formulae which speeds up mental calculation. It helps any person to solve complex problems quite quickly.

Let's talk about FIVE such POWERFUL tricks of VEDIC MATH. You will definitely be able to calculate mentally and fast concerning the areas of the tricks taught here, once you go through the entire article. If you want to see the video about the same tricks, you can click on the link given below each trick.

SMART TRICK#1

Multiplication with 5.

Video Explanation Link: <https://youtu.be/4rhKYJzsOI8>

The only catch here is, read 5 as $(10/2)$. So, put one zero behind the number to be multiplied with 5, and divide it by 2. Look at the example below and try to understand the steps to do mentally. This method is very effective which shall help you to solve the question in just few seconds!

$$\begin{aligned} \text{Q: } & 6842 \times 5 \\ & = 6842 \times (10/2) \\ & = (6842 \times 10) / 2 \\ & = 68420 / 2 \\ & = 34210 \end{aligned}$$

SMART TRICK#3

To multiply any two 3-digit numbers:

Video Explanation Link: <https://youtu.be/4rhKYJzsOI8>

Let two numbers be 'abc' and 'def'.

$$abc \times def = (a \times d) / (a \times e + b \times d) / (a \times f + b \times e + c \times d) / (b \times f + c \times e) / (c \times f)$$

This trick is derived from the knowledge of our Vedas. This method of multiplication is basically the application of a Vedic Sutra Urdhva – tiryagbhyam (ऊर्ध्व तिर्यग्भ्याम्). This sutra means “Vertically and Crosswise”. If you see the below figure, you shall notice, the digits are multiplies in a specific pattern vertically and crosswise. Focus on the given arrows and try to follow the steps.

GO BACK TO INDEX

Let's say we need to multiply 123 with 102.

Q: 123 X 102

Step 1: (1X1) =	1
Step 2: (1X0) + (2X1) =	2
Step 3: (1X2) + (3X1) + (2X0) =	5
Step 4: (2X2) + (3X0) =	4
Step 5: (3X2) =	6

Answer: 12546

Q: 456 X 231 (concept of carry forward)

Step 1: (4X2) =	8
Step 2: (4X3) + (5X2) =	22
Step 3: (4X1) + (6X2) + (5X3) =	31
Step 4: (5X1) + (6X3) =	23
Step 5: (6X1) =	6

Answer: 105336

The above trick is extremely helpful in multiplying any two 3-digit numbers mentally with in just a few seconds!

SMART TRICK#4

To multiply any number with the number made up of 9's.

Video Explanation Link: <https://youtu.be/4rhKYJzsOI8>

[GO BACK TO INDEX](#)

In this trick, As many digits one number contains, the other number contains the same number of nines. For an example, (876 X 999). Here 876 contain three digits. And another number is 999 which contains three nines.

Q: 38 X 99

Step 1: lessen 1 from 38 and put the result of Left Hand Side (LHS).

$$(38 - 1 = 37)$$

Step 2: Write 99 on Right Hand Side (RHS).

After step 2, we can have 3799

Step 3: subtract the number got at the end of step 1 from the above number.

$$3799 - 37 = 3762$$

So, 3762 would be the answer.

	3	8
X	9	9
LHS	RHS	
38 - 1	99	
37	99	
-	37	
37	62	
Answer: 3762		

Q: 637 X 999

	6	3	7
X	9	9	9
LHS	RHS		
637 - 1	999		
636	999		
-	636		
636	363		

Answer: 636363

SMART TRICK#5

Square of the numbers between 90 to 110

Video Explanation Link:

<https://youtu.be/4rhKYJzsOI8>

Here, we would take '100' as base. We would do the mind calculations with three simple steps:

Step 1: Find the difference from base i.e. [(Number) - (Base)]

Step 2: (Number itself) + (difference).

This makes the first two digits of the answer.

Step 3: Square of a difference. This makes the last two digits of the answer. If the square is of three digits, we need to keep last two digits of it which represent last two digits of the answer. The hundreds place would be carried forward. Let's understand this more by taking a few examples:

Q: $(99)^2$

Step 1: Find the difference from base

$$99 - 100 = (-1)$$

Step 2: $(99) + (\text{difference})$

$$99 + (-1) = 98$$

Step 3: Square of the difference to be written in two digits

$$(-1)^2 = 01$$

So, it comes to 9801.

Thus, the answer comes to 9801.

Q: $(108)^2$

Step 1: Find the difference from base

$$108 - 100 = (8)$$

Step 2: $(108) + (\text{difference})$

$$108 + (8) = 116$$

Step 3: Square of the difference to be written in two digits

$$(8)^2 = 64$$

So, it comes to 11664

Thus, the answer comes to 11664.

Hope you enjoyed these tricks. Practice with these tricks, we are sure you shall soon be 'Human Computers'. We are with you in this journey! If you want to have video explanations for the same, you can click the link below!
